

Commercial Title Insurance Online

Our commercial online system makes accessing title insurance faster, easier and more cost effective

At First Title our mission is to provide the best, most comprehensive and most innovative title insurance on the market.

To further extend our services to our clients, we have developed a commercial online system that makes the process of arranging title insurance faster and easier.

Also, by providing the service online we are able to offer discounts on our premiums making our policies even more cost effective.

A system based on clear and precise assumptions

To make our commercial title insurance available online, our underwriters have developed a series of assumptive questions. This makes it possible to receive a quotation, a draft policy or an issued policy without having to wait for an underwriter to respond. As well as making the whole process easier and faster, our online system can be accessed 24 hours a day, 7 days a week.

A comprehensive choice of commercial insurance

Our online system offers a choice of continued use insurance up to a value of £15 million and development

property or change of use insurance up to £5 million with optional inflation cover on both. Premiums are displayed on screen and documentation is provided instantly when a property has been placed on risk or if a draft policy has been requested.

The system also offers time-saving features such as postcode search, which automatically enters the property address when completing the mandatory information.

A range of useful, flexible and valuable benefits

We have designed our online system to offer access to as many registered users as you need, with each user supplied with a unique user name and password.

By operating online you can draft, issue or modify a case once it has been saved into the case management system and save your quotations for up to three months.

The online system also allows the demand and needs statement to be issued, and, prior to the final

policy being issued, all drafts and modifications are provided completely free of charge. Multiple commercial risks are also available online.
